ZEBL · ATTENDANCE & HR PLATFORM

SUPER ADMIN

User Guide

Full platform administration — everything in the HR workspace, plus user & role management, anonymous tickets, and the settings only this role can change.

Contents

01
Getting Started
Signing in and how the admin workspace is laid out for you.

02
The HR Command Center
Your dashboard — organization-wide, at a glance.

03
Employees
The directory and full employee profile.

04
Attendance & Regularization
The daily register and the correction-request queue.

05
Payroll Attendance
Period summaries, exports, and recompute.

06
Leave Management
Reviewing requests, the leave calendar, and leave policy vs. settings.

07
Helpdesk — Tickets & Anonymous Tickets
Managing employee support requests, including anonymous ones.

08
Uploading Attendance Data
Importing biometric data from Excel or PDF.

09 · If Enabled
Hiring Workspace
Recruitment, from job opening to converted employee.

10
System Operations
Analytics, operations health, notifications, integrations, audit log.

11
Security & Sessions
Org-wide login history, with full authority to act.

12
Settings
HR, payroll, attendance, and leave configuration — including the edit-only screens.

13 · Exclusive

Platform Administration

User & role management — exclusive to Super Admin.

14 · If Applicable

My Own Workspace

If you're also an employee of the company yourself.

15

Getting Help & FAQ

Common questions, answered.

CHAPTER 01

Getting Started

Signing in and how the admin workspace is laid out for you.

This guide covers the Super Admin role — the platform's highest level of access. You see everything HR sees, plus platform administration and a few elevated actions on screens you otherwise share with HR.

Signing in

Sign in with your work email and password, or Sign in with Microsoft if Entra ID is connected. You land on the HR Command Center at `/admin/dashboard` — the same home screen as HR.

How the admin workspace is organized

The left-hand menu groups everything into: Core Workforce (Chapters 3–8), Hiring Workspace (Chapter 9, if recruitment is enabled), System Operations (Chapter 10), Security (Chapter 11), Settings (Chapter 12), and — unique to you — Platform Administration (Chapter 13). If you're personally linked to an employee record, you'll also see My Workspace (Chapter 14).

> **HOW THIS GUIDE DIFFERS FROM THE HR GUIDE**
>
> Chapters 2–12 describe screens you share with HR almost entirely as-is — with elevated capability called out wherever it applies. Chapter 13 is exclusively yours.

CHAPTER 02

The HR Command Center

Your dashboard — organization-wide, at a glance.

Your dashboard (`/admin/dashboard`) is the executive view of the whole organization: headcount, attendance and leave snapshots, and pending approvals.

Use it as your daily starting point before drilling into a specific module.

CHAPTER 03

Employees

The directory and full employee profile.

Employees (`/admin/employees`) is the organization's people directory.

Browsing and searching

Search or filter the full employee list, then open any record to reach its profile.

Employee profile — `/admin/employees/[id]`

Identity, a date-range filterable attendance summary, leave balances and history, and manager assignment — who this person reports to, which drives their manager's "My Team" view.

> **NOTE**
>
> Administering an HR or Super Admin account (password reset, lock/unlock) is something only you can do — HR can only administer Employee and Manager accounts. See Chapter 13 for role changes specifically.

CHAPTER 04

Attendance & Regularization

The daily register and the correction-request queue.

The org-wide register, and the queue of correction requests waiting on a decision.

Attendance register — `/admin/attendance`

Search and filter every employee's daily attendance by date, payroll period, shift, shortfall, or overtime. Days with an active regularization request are flagged.

Regularization queue — `/admin/attendance/regularization`

Correction requests organized into Pending, Approved, Rejected, and Cancelled tabs.

- Open a pending request to see the stated reason next to the original raw punch record.
- Approve or reject — approving applies a correction overlay; the original punch is preserved, never overwritten.
- The employee is notified and sees the outcome on their own History page.

CHAPTER 05

Payroll Attendance

Period summaries, exports, and recompute.

`/admin/payroll-attendance` turns raw daily attendance into payroll-period summaries.

Filter by shortfall, overtime, late arrivals, absences, or "pending decision." Export to CSV or PDF for payroll processing, and use Refresh to recompute a period after late corrections land.

CHAPTER 06

Leave Management

Reviewing requests, the leave calendar, and leave policy vs. settings.

Organization-wide leave — requests, calendar, and policy.

Leave requests — `/admin/leaves`

Review every leave request: filter by status or search, approve or reject, and check anyone's balance overview.

Leave calendar — `/admin/calendar`

Organization-wide approved leave and holidays, filterable by department.

Importing opening balances — `/admin/leaves/import`

Migrate legacy EL/CL/SL balances from an Excel file. Each run is tracked as a single batch so its changes can be audited together as a unit — it's a "set to" operation, so re-running the same file is safe and idempotent.

> **TIP**
>
> The per-employee balance-adjustment form on an employee's profile (Chapter 3) also supports this "set to" mode alongside the existing add/deduct delta — use the bulk importer for a one-time migration, and the profile form for individual corrections. The profile form only appears while "Allow HR to manually adjust leave balances" is on in Leave Settings.

> **UNPAID DAYS (LOP)**
>
> When an employee requests more days than their balance covers, the request is not rejected — it goes through the normal approval chain, and the days beyond the balance are recorded as Loss of Pay (LOP) on that same request. These show as "· N unpaid" in the request list, the approval record, and leave history, and flow into payroll. Requests over the monthly leave limit are different: they're blocked at submission.

Migration controls — manual balances and historical leave

Three switches under Settings ’ Leave Settings control how much HR can change directly on an employee's profile. They're meant for the migration period; turn them off once opening data is settled.

Setting	What it allows on the employee profile
`Allow HR to manually adjust leave balances`	The balance form on the Leave Balances tab — add/deduct, or "set to" a value. When off, the tab says manual adjustments are disabled and balances only change through accrual and approved requests.
`Allow HR to add historical leave entries`	An "Add historical leave" form on the Leave History tab for leave taken before go-live, with its real dates and reason. It's recorded as already approved and deducts the balance immediately — no approval chain.

`Allow HR to correct historical leave entries`	An edit option on existing historical entries. The original is reversed and kept on record, and a corrected entry is created in its place — nothing is silently overwritten.

Leave Policy vs. Leave Settings

`/admin/leave-policy` is the read-only, published document. The actual rules are configured at Settings ’ Leave Settings (Chapter 12) and flow through automatically.

CHAPTER 07

Helpdesk — Tickets & Anonymous Tickets

Managing employee support requests, including anonymous ones.

`/admin/tickets` is where every employee support request lands — plus one screen only you can see.

> **SUPER ADMIN ONLY**
>
> `/admin/tickets/anonymous` lists tickets submitted anonymously — with the submitter's real identity revealed. HR and everyone else is redirected away from this screen; use it sparingly and only when there's a genuine need to know who filed it.

- Open a ticket to see category, priority, subject, and description.
- Assign it, and respond publicly or with an internal HR-only note.
- Update status and priority; every action is kept in a full audit trail.

CHAPTER 08

Uploading Attendance Data

Importing biometric data from Excel or PDF.

`/admin/upload` imports biometric attendance from the device export.

- Choose the file — Excel or PDF, eSSL Daily or Summary format.
- Large files upload in resumable chunks.
- Review parsed rows in preview mode if enabled.
- Confirm — new punches flow into Attendance and Payroll Attendance.

CHAPTER 09 · IF ENABLED

Hiring Workspace

Recruitment, from job opening to converted employee.

Recruitment is feature-flagged; toggling it on or off for the organization is your call.

Stage	Screen	What happens
`1. Job Opening`	/admin/recruitment/jobs	Create the posting, hiring team, headcount, pipeline stage template.
`2. Candidate`	/admin/recruitment/candidates	Full profile; resume upload with a review-before-accept import draft.
`3. Application`	/admin/recruitment/applications	Link a candidate to a job; track pipeline status and recruiter.
`4. Pipeline`	/admin/recruitment/pipeline	Drag-and-drop board; launch interviews, offers, or conversion.
`5. Interview`	/admin/recruitment/interviews	Schedule, assign panelists, collect structured feedback.
`6. Offer`	/admin/recruitment/offers	Draft ’ manager approval ’ HR approval ’ release ’ accept/decline. Versioned offer-letter PDF.
`7. Conversion`	/admin/recruitment/conversions	The only path to "hired" — converts an accepted offer into an Employee record.

Supporting screens: Communications, Reports, and module Settings/Analytics.

YOUR CALL TO MAKE

Enabling recruitment, and granting a manager standalone recruitment access without promoting them to HR, are both organization-level decisions that sit with you.

PUBLIC CAREER PORTAL

External candidates apply through `/apply` — public, no login required, and only reachable while recruitment is enabled.

CHAPTER 10

System Operations

Analytics, operations health, notifications, integrations, audit log.

Monitoring and configuration for the platform itself.

Screen	What it shows
`/admin/analytics`	Workforce intelligence — offline-computed executive snapshot, anomalies, operational metrics.
`/admin/operations`	Background worker health, queue depth, failed jobs, workflow integrity.
`/admin/notifications`	Email/Teams notification delivery queue — failures and retries.
`/admin/integrations`	Microsoft Teams webhook, Outlook calendar sync status, Graph API health, escalation automation.
`/admin/audit`	The centralized audit trail across auth, employee/role admin, leave workflow, tickets, approval tokens, calendar sync, Teams, org sync.

> **TIP**
>
> The Audit Log is your first stop whenever something needs to be reconstructed after the fact — who changed a role, who approved what, and when.

CHAPTER 11

Security & Sessions

Org-wide login history, with full authority to act.

`/admin/security` is the organization-wide login history and active session list — filterable by user, role, department, browser, date, or status.

> **ONLY YOU CAN ACT HERE**
>
> You can force-expire or revoke any user's active session directly from this screen — HR can view the same data but cannot act on it. Use this for a compromised account or a device that must be signed out immediately.

Legacy links `/admin/security/active-sessions` and `/admin/security/login-history` both redirect here.

CHAPTER 12

Settings

HR, payroll, attendance, and leave configuration — including the edit-only screens.

Configuration for how the organization's rules are applied — including the screens only you can edit.

Screen	What you configure
`/admin/settings`	Workflow escalation, notification, and integration defaults; your own change-password form.
`/admin/payroll-settings`	Payroll cycle start day, required office time, grace period, overtime thresholds, per-shift overrides.
`/admin/shift-settings` `(edit: you only)`	Named shifts — start/end time, grace period, expected work minutes. HR can view this screen, but only you can save changes.
`/admin/attendance-settings` `(edit: you only)`	Default weekly working-day schedule and date-specific exceptions. HR can view this screen, but only you can save changes.
`/admin/leave-settings`	Leave cycle, Earned Leave accrual, Sick Leave policy, monthly and consecutive-day limits, advance notice, and the migration switches for manual balance adjustments and historical leave entries — feeds the read-only Leave Policy page.

CHAPTER 13 · EXCLUSIVE

Platform Administration

User & role management — exclusive to Super Admin.

This menu group exists only for Super Admin. It carries real consequences — read each section before acting.

User Management — `/admin/user-management`

The only place in ZEBL AMS to change a user's role, and the only place to activate or deactivate an account. Filter by role, status, or search.

> **BEFORE PROMOTING SOMEONE TO HR OR SUPER ADMIN**
>
> That account immediately gains organization-wide visibility into attendance, leave, and (if enabled) recruitment data. Treat it the same as any other access-elevation decision in your organization.

Anonymous Tickets — `/admin/tickets/anonymous`

Covered in Chapter 7 — repeated here because it's part of the same exclusive menu group. Every other role, including HR, is redirected away from this URL.

- Find the user and open their record.
- Change their role, or toggle their account active/inactive.
- Save. The affected user must sign out and back in before the change takes effect — their current session still carries the old permissions until they refresh it.

CHAPTER 14 · IF APPLICABLE

My Own Workspace

If you're also an employee of the company yourself.

If you're also linked to an employee record — because you're an employee of the company yourself — a My Workspace group appears in your menu.

My Dashboard
Your own attendance snapshot.

My Attendance
Your own history.

My Leaves
Your own balances and requests.

My Profile
Your own details and photo.

NOTE

You will not get "My Team," ticket-raising, or an Approval Center here — those are Employee/Manager-shell features, separate from your administrative access.

CHAPTER 15

Getting Help & FAQ

Common questions, answered.

I changed a user's role and they say nothing changed — why?

They need to sign out and back in. Role and permission changes are carried in the session and only apply on the next login.

An account is compromised right now — what's the fastest way to lock it down?

Go to `/admin/security`, find their active sessions, and force-expire them. Then deactivate the account from `/admin/user-management` if needed, and reset their password.

Can HR ever see who filed an anonymous ticket?

No — that identity is visible only to Super Admin, by design, regardless of ticket content or urgency.

Should I enable Recruitment for the organization?

It's off by default and is a large module. Turn it on when your organization is ready to run hiring through the platform — see Chapter 9 for what that unlocks.

Who can define or edit shifts?

Only you, at `/admin/shift-settings`. HR can view the list but the save action is disabled for them by design — same pattern as attendance scheduling.

How does the late arrival policy work?

It's off by default; switch it on from the Late arrival policy card on `/admin/shift-settings`. A check-in after the employee's shift start plus its grace period counts as late. After the free allowance for the calendar month (2 by default), every further late arrival automatically records an approved 0.5-day Casual Leave — or loss of pay if the CL balance can't cover it. Holidays, weekly offs, days that already have leave on them, and regularised days are skipped, and it only applies from the day after you switch it on.

> **NOTE**
>
> It can only judge employees who have an active shift assigned — the card shows how many active employees don't. Employees contest a specific day through Attendance Regularization; when HR approves it, the half-day is cancelled and the balance refunded.

Where's the definitive record of who did what?

The Audit Log (`/admin/audit`, Chapter 10) — it covers auth, role changes, leave workflow, tickets, approval tokens, and sync events.

ZEBL AMS

End of the Super Admin User Guide.
