

EMPLOYEE

User Guide

Everything you need to mark your day, request leave, fix an attendance mistake, and get help — from your own dashboard.

Contents

01 Getting Started

Logging in, first-time password change, and finding your way around.

02 Your Dashboard

Today's status, KPI cards, and your monthly attendance heatmap.

03 Your Profile

Viewing your details and updating your photo.

04 Attendance & Regularization

Reading your history and fixing a punch that looks wrong.

05 Leave Management

Balances, holidays, requesting leave, and the policy document.

06 Helpdesk — My Tickets

Raising a request to HR and tracking the reply.

07 Notifications & Settings

Controlling alerts and changing your password.

08 Security & Sessions

Reviewing your sign-ins and signing out other devices.

09 Interview Invitations

If you've been asked to sit on an interview panel.

10 Getting Help & FAQ

Common questions, answered.

01 Getting Started

This guide covers the **Employee** workspace of ZEBL AMS — the self-service area where you check your attendance, manage leave, and reach HR. If you lead a team, ask HR whether the Manager Guide applies to you instead.

Signing in

Open the ZEBL AMS login page and sign in with your work email and password. If your organization has connected Microsoft Entra ID, you'll also see a **Sign in with Microsoft** button — either option takes you to the same workspace.

FIRST LOGIN

If HR just created your account, you'll be asked to set a new password before you can do anything else. This screen cannot be skipped — choose a password only you know, and you're in.

Finding your way around

Once signed in, you land on your . The left-hand menu is grouped under **Workspace** and lists everything covered in this guide: Dashboard, Profile, History, Leaves, Leave Policy, My Tickets, Settings, and Security. Your name and photo sit in the top corner — click them any time to jump to your profile.

NOTE

Every screen in your workspace only ever shows *your own* records. If you need to see a colleague's attendance or approve someone else's leave, that requires the Manager role — check with HR.

02 Your Dashboard

Your dashboard (</employee/dashboard>) is built to answer one question at a glance: *how am I doing this month?*

Today's status

A hero widget showing whether you've clocked in, your first-in / last-out time, and whether today is trending late, on-time, or incomplete.

KPI cards

Rolled-up numbers for the current period — present days, late arrivals, early exits, overtime, and shortfall hours.

Attendance heatmap

A calendar-style heatmap of the month, color-coded by day status, with your current on-time streak highlighted.

TIP

Hover or tap a day in the heatmap to see exactly what was recorded for it. If a day looks wrong, jump straight to [History](#) (Chapter 4) to raise a correction.

03 Your Profile

Your profile page (`/employee/profile`) shows your identity — name and email — as held by HR, plus your profile photo.

Updating your photo

- 1 Go to `Profile` in the left menu.
- 2 Select **Change photo** and choose an image from your device.
- 3 Confirm the crop/preview, then save. Your new photo appears immediately across the dashboard, top bar, and any team views you appear in.

NOTE

Your name and email are managed by HR. If either is wrong, raise a ticket from `My Tickets` (Chapter 6) rather than trying to edit it yourself.

04 Attendance & Regularization

`History` (`/employee/attendance`) is your full personal attendance record — every day, exactly as the system captured it.

Reading your history

Use the date-range filter to jump to any past period; results are paginated so recent days always load first. Each row shows your first-in and last-out punches plus flags for late arrival, early exit, overtime, or shortfall against your expected hours.

Requesting a correction

Punch data comes from the biometric device and is never edited directly — not even by HR. If a day looks wrong (a missed punch, a device glitch, an approved late arrival that wasn't recorded), you submit a **regularization request** and HR reviews it against the original record.

- 1 Open the day in question from `History` .
- 2 Select **Request correction** and state what actually happened and why.
- 3 Submit. The request lands in HR's regularization queue.
- 4 Track its status — *Pending*, *Approved*, *Rejected*, or *Cancelled* — directly on that day's entry.

TIP

If HR approves your request, the day shows both the original punch record and the approved correction — nothing is silently overwritten, so the history stays auditable.

05 Leave Management

Everything about your leave lives under `Leaves` (`/employee/leaves`).

Balances and holidays

At the top of the page you'll see your current balance broken down by leave type (e.g. Earned Leave, Sick Leave, Casual Leave), plus the organization's upcoming holiday list.

Requesting leave

- 1 Select **Request leave**.
- 2 Choose the leave type, start and end dates, and add a reason.
- 3 Submit — this starts a multi-step approval chain (typically your manager, then HR).
- 4 Track the request's progress and current approver on the same page.

NOTE

If your Earned Leave balance runs out, the system can automatically convert unpaid days to Loss of Pay (LOP) per policy — check your balance before requesting extended leave.

Leave Policy

`Leave Policy` is a read-only page showing your organization's published leave rules — accrual, carry-forward, and eligibility — exactly as HR has configured them.

06 Helpdesk — My Tickets

Use `My Tickets` (`/employee/tickets`) whenever you need HR's help with something that isn't self-service — a payslip query, a document request, an access issue.

- 1 Select **New ticket**.
- 2 Pick a category and priority, then add a subject and description.
- 3 Submit — HR is notified and the ticket appears in your list.
- 4 Reply in the thread as needed; you'll see HR's public replies, though any internal HR-only notes stay hidden from you.

SENSITIVE TOPICS

If your organization has anonymous ticketing enabled, use that option for matters you'd rather not attach your name to — only the Super Admin can see the submitter's identity on those.

07 Notifications & Settings

`Settings` (`/employee/settings`) is where you control how ZEBL AMS reaches you and keep your password current.

Setting	What it does
Notification preferences	Choose which email/Teams alerts you receive — approval updates, ticket replies, reminders.
Change password	Update your password at any time; you don't need to wait for it to expire.
Profile photo shortcut	A quick link back to the photo uploader on your Profile page.

08 Security & Sessions

[Security](#) (</employee/security>) shows your own sign-in history and every device currently signed in to your account.

Each entry lists the browser, approximate location/IP, and time. If you spot a sign-in you don't recognize, end that session immediately and change your password from [Settings](#) .

TIP

Ending a session there and then changing your password logs that device out for good — it will need your new password to sign back in.

09 Interview Invitations

This chapter only applies if you've been asked to interview a candidate — it isn't a menu item that appears for everyone.

If a recruiter adds you as a panelist on a scheduled interview, an **Interviews** item appears in your menu automatically (`/employee/interviews`). It lists your upcoming, completed, and cancelled interviews.

- 1 Open the interview to see the candidate's profile and role.
- 2 After the interview, record your structured feedback — rating, recommendation, strengths, and concerns.
- 3 The item disappears from your menu once you have no active panel assignments.

10 Getting Help & FAQ

Still stuck? Start with the questions below, then raise a ticket (Chapter 6) for anything else.

I forgot my password. What do I do?

Use **Forgot password** on the login page, or ask HR to reset it for you.

I got an email asking me to approve a leave request — what is that?

Occasionally, if you're named as an approver in someone's leave workflow, you'll receive a one-time secure link by email or Teams that lets you approve or reject directly — no login required. It expires after a set number of hours and can only be used once.

Why can't I see a colleague's attendance or leave?

Employee accounts only ever show your own records. Team visibility is a Manager-level capability — see your line manager or HR if you believe you should have it.

My regularization request has been pending a while — what now?

Raise a ticket referencing the date in question; HR can look up the queue directly.

Who do I contact for anything not covered here?

Raise a ticket from My Tickets — that's the fastest way to reach HR inside the system.

ZEBL AMS

End of the Employee User Guide.
