

HR

User Guide

Workforce administration end to end — employees, attendance, payroll attendance, leave, recruitment, tickets, and the operational tools behind them.

Contents

01 Getting Started

Signing in to the admin workspace and how it's laid out.

02 The HR Command Center

Your dashboard — organization-wide, at a glance.

03 Employees

The directory and full employee profile.

04 Attendance & Regularization

The daily register and the correction-request queue.

05 Payroll Attendance

Period summaries, exports, and recompute.

06 Leave Management

Reviewing requests, the leave calendar, and leave policy vs. settings.

07 Helpdesk — Tickets

Managing employee support requests.

08 Uploading Attendance Data

Importing biometric data from Excel or PDF.

09 Hiring Workspace

Recruitment, from job opening to converted employee.

10 System Operations

Analytics, operations health, notifications, integrations, audit log.

11 Security & Sessions

Org-wide login history and what HR can and can't do here.

12 Settings

HR, payroll, attendance, and leave configuration.

13 My Own Workspace

If you're also an employee of the company yourself.

14 Where HR's Access Ends

What only a Super Admin can do, and why.

15 Getting Help & FAQ

Common questions, answered.

01 Getting Started

This guide covers the **HR** role in ZEBL AMS — full workforce administration through the admin workspace, shared with the Super Admin role but without platform-level user/role management.

Signing in

Sign in with your work email and password, or **Sign in with Microsoft** if Entra ID is connected. You land on the HR Command Center at `/admin/dashboard` .

How the admin workspace is organized

The left-hand menu groups everything into: **Core Workforce** (Chapters 3–8), **Hiring Workspace** (Chapter 9, if recruitment is enabled for your organization), **System Operations** (Chapter 10), **Security** (Chapter 11), and **Settings** (Chapter 12). If you're personally linked to an employee record, you'll also see **My Workspace** (Chapter 13).

NOTE

You will not see a "Platform Administration" group — that's exclusive to Super Admin. See Chapter 14 for exactly where the line sits.

02 The HR Command Center

Your dashboard (`/admin/dashboard`) is the executive view of the whole organization: headcount, attendance and leave snapshots, and pending approvals, all in one place.

Use it as your daily starting point — it surfaces what needs attention today before you drill into a specific module.

03 Employees

Employees (`/admin/employees`) is the organization's people directory.

Browsing and searching

Search or filter the full employee list, then open any record to reach the individual profile.

Employee profile — `/admin/employees/[id]`

A full detail view: identity, an attendance summary that's date-range filterable, leave balances and history, and manager-assignment — pick who this person reports to, which is what drives their manager's "My Team" view.

TIP

Setting the manager assignment correctly here is the single most important step for the approval workflow and team-scoped views to work as expected.

04 Attendance & Regularization

Two connected screens: the org-wide register, and the queue of correction requests waiting on your decision.

Attendance register — `/admin/attendance`

Search and filter every employee's daily attendance by date, payroll period, shift, shortfall, or overtime. Results are paginated, and days with an active regularization request are flagged.

Regularization queue — `/admin/attendance/regularization`

Every correction request an employee has submitted against their own punch record, organized into *Pending*, *Approved*, *Rejected*, and *Cancelled* tabs.

- 1 Open a pending request to see the employee's stated reason next to the original raw punch record.
- 2 Approve or reject. Approving applies a correction *overlay* — the original punch is preserved underneath, never overwritten.
- 3 The employee is notified and can see the outcome on their own History page.

NOTE

Keeping the raw record intact is deliberate — it keeps every correction auditable later, including by Super Admin via the Audit Log (Chapter 10).

05 Payroll Attendance

`/admin/payroll-attendance` turns raw daily attendance into payroll-period summaries.

Filter by shortfall, overtime, late arrivals, absences, or "pending decision" to find exceptions before a payroll run. Export the result to CSV or PDF for payroll processing or an audit trail, and use **Refresh** to manually recompute a period after late corrections land.

BEFORE YOU EXPORT

Clear out any still-pending regularization requests for the period first (Chapter 4) — approved corrections change the numbers that flow into payroll.

06 Leave Management

Everything to do with organization-wide leave — requests, the calendar, and the policy document.

Leave requests — `/admin/leaves`

Review every leave request in the organization: filter by status or search for a specific employee, approve or reject, and check anyone's leave balance overview from the same screen.

Leave calendar — `/admin/calendar`

An organization-wide calendar of approved leave and holidays, filterable by department — useful for spotting coverage gaps before approving more time off.

Leave Policy vs. Leave Settings

`/admin/leave-policy` is the read-only, employee-facing document. The actual rules behind it — leave cycle, Earned Leave accrual, Sick Leave policy — are configured separately under

`Settings → Leave Settings` (Chapter 12). Edit the settings; the policy page updates to match automatically.

07 Helpdesk — Tickets

`/admin/tickets` is where every employee support request lands.

- 1 Open a ticket to see the employee's category, priority, subject, and description.
- 2 Assign it to yourself or a colleague, and respond — replies can be public (visible to the employee) or internal notes (HR-only).
- 3 Update status and priority as it progresses; every action is kept in a full audit trail on the ticket.

HR DOES NOT SEE THIS

Anonymous tickets are handled separately at `/admin/tickets/anonymous` — that screen, and the submitter's real identity behind an anonymous ticket, is visible to Super Admin only.

08 Uploading Attendance Data

`/admin/upload` imports biometric attendance from the device export.

- 1 Choose the file — Excel or PDF, in either the eSSL Daily or Summary format.
- 2 For large files, the upload is chunked and resumable, so a dropped connection doesn't mean starting over.
- 3 If preview-before-confirm is enabled, review the parsed rows before they're committed.
- 4 Confirm the import — the new punches flow into Attendance (Chapter 4) and, from there, Payroll Attendance (Chapter 5).

TIP

Run imports before reviewing the regularization queue for the same period — that way you're approving corrections against complete data.

09 Hiring Workspace

Recruitment is the largest module in ZEBL AMS and may be switched off in your organization's deployment — if you don't see this menu group, ask your Super Admin whether it should be turned on.

The hiring flow moves in one direction:

Stage	Screen	What happens
1. Job Opening	<code>/admin/recruitment/jobs</code>	Create the posting, hiring team, headcount, and pipeline stage template.
2. Candidate	<code>/admin/recruitment/candidates</code>	Full profile — experience, education, skills, documents. Upload a resume and use the review-before-accept import draft rather than trusting parsing blindly.
3. Application	<code>/admin/recruitment/applications</code>	Link a candidate to a job; track pipeline status and the assigned recruiter.
4. Pipeline	<code>/admin/recruitment/pipeline</code>	A drag-and-drop board through hiring stages; launch interviews, offers, or a conversion from each card.
5. Interview	<code>/admin/recruitment/interviews</code>	Schedule, assign panelists, and collect structured feedback (rating, recommendation, strengths/concerns).
6. Offer	<code>/admin/recruitment/offers</code>	Draft compensation → manager approval → HR approval → release → accept/decline. Produces a versioned offer-letter PDF.
7. Conversion	<code>/admin/recruitment/conversions</code>	The only path to "hired" — turns an accepted offer into a real Employee record, with a preview before you commit.

Supporting screens: **Communications** (candidate email inbox/drafts/templates), **Reports** (time-to-hire, sources, funnel, offer acceptance), and **Settings/Analytics** for the module itself.

NOTE

A small number of managers may be individually granted recruitment access without becoming HR — if you see a manager acting in this module, that's expected and intentional, not a permissions gap.

PUBLIC CAREER PORTAL

External candidates apply through `/apply` — a public page requiring no login. It only exists while recruitment is enabled.

10 System Operations

Monitoring and configuration screens for the platform itself.

Screen	What it shows
<code>/admin/analytics</code>	Workforce intelligence — an offline-computed executive snapshot: anomalies and operational metrics.
<code>/admin/operations</code>	Background worker health, queue depth, failed jobs, and workflow integrity checks.
<code>/admin/notifications</code>	The email/Teams notification delivery queue — failures and retries.
<code>/admin/integrations</code>	Microsoft Teams webhook configuration, Outlook calendar sync status, Graph API health, escalation automation.
<code>/admin/audit</code>	The centralized audit trail: auth events, employee/role changes, leave workflow, tickets, approval tokens, calendar sync, Teams, org sync.

TIP

If an employee reports "I approved this by email but nothing changed," check Operations and the Audit Log first — most one-time-link issues show up there as an expired or already-used token.

11 Security & Sessions

`/admin/security` is the organization-wide login history and active session list — filterable by user, role, department, browser, date, or status.

Use it to investigate a reported account issue or confirm someone's last sign-in. (*Legacy links:*

`/admin/security/active-sessions` and `/admin/security/Login-history` both redirect here.)

HR CAN VIEW, NOT ACT **VIEW ONLY**

You can see every user's sessions here, but you cannot force-expire or revoke another user's session — that action is Super Admin only. If a compromised account needs an immediate forced logout, escalate to your Super Admin.

12 Settings

Configuration for how the organization's rules are applied.

Screen	What you configure
<code>/admin/settings</code>	Workflow escalation, notification, and integration defaults; also your own change-password form.
<code>/admin/payroll-settings</code>	Payroll cycle start day, required office time, grace period, overtime thresholds, and per-shift overrides.
<code>/admin/attendance-settings</code> VIEW ONLY	Default weekly working-day schedule and date-specific exceptions. You can view this screen, but the form is read-only for HR — only Super Admin can save changes here.
<code>/admin/leave-settings</code>	Leave cycle, Earned Leave accrual rules, Sick Leave policy — this is what feeds the read-only Leave Policy page (Chapter 6).

NOTE

If you need a change to the weekly working-day schedule or a date override, raise it with your Super Admin — you'll see the current configuration but the save action is disabled for HR by design.

13 My Own Workspace

If you, as an HR user, are also linked to an employee record — because you're an employee of the company yourself — a **My Workspace** group appears in your menu.

It gives you exactly four self-service screens, deliberately scoped down from the full Employee experience:

- **My Dashboard** — your own attendance snapshot.
- **My Attendance** — your own history.
- **My Leaves** — your own balances and requests.
- **My Profile** — your own details and photo.

NOTE

You will not get "My Team," ticket-raising, or an Approval Center here — those are Employee/Manager-shell features. Use them only if you're specifically acting as an approver elsewhere in the organization's chart.

14 Where HR's Access Ends

HR and Super Admin share nearly the entire admin workspace. These are the specific, deliberate exceptions — know them so you can escalate quickly instead of hunting for a missing button.

Area	HR	Super Admin
User accounts & roles	Can administer <i>Employee</i> and <i>Manager</i> accounts only (reset password, lock/unlock)	Full access, including HR and Super Admin accounts
Changing a user's role	Not available	Only place this can be done — at <code>/admin/user-management</code>
Attendance scheduling settings	View only	Can edit
Anonymous tickets	No access	Full access, including submitter identity
Force-expiring a user's session	Not available	Available on <code>/admin/security</code>

TIP

None of this is a bug if a button is missing or a form is disabled — it's the platform's target-aware permission model working as intended. Raise a ticket or reach out directly to your Super Admin for anything in this table.

15 Getting Help & FAQ

An employee says their punch is missing entirely, not just wrong — what do I do?

Check whether the day's device export was imported (Chapter 8) before assuming it's a regularization case — a missing day usually means the import hasn't run yet for that date.

I changed someone's role-adjacent setting (like recruitment ops access) and nothing changed — why?

Permission and role changes require the affected user to sign in again — the change is carried in their session and won't apply until they refresh it by logging out and back in.

Why can't I edit the attendance settings page?

That's expected — it's Super Admin-only to edit, HR-viewable only. See Chapter 14.

An employee wants to submit a ticket anonymously — can I see who it is?

No. Anonymous ticket identity is visible to Super Admin only, by design.

Where do I go for anything not covered in this guide?

Check the Audit Log (Chapter 10) for a factual trail of what happened, or escalate to your Super Admin for anything listed in Chapter 14.

ZEBL AMS

End of the HR User Guide.
